Workflow Exploration Report

Gemini Connector Api Check

Website: <https://dev.roost.ai>

Feature Area: a72e278e-b4ac-4cdd-bb50-a0c37404c643

Goal: Submit the form and confirm the connector is created (success toast / the new connector appears in the list).

Generated: June 23, 2026 at 01:38 PM

Confidence: 95%

The AI successfully executed the workflow to create a Gemini AI connector. It navigated to the connectors page, opened the creation form, and filled in the connector name and API key. After encountering initial failures due to a duplicate name, the AI iteratively adjusted the connector name until it was successfully created and verified.

The screenshot displays the Roost AI dashboard interface. At the top, there's a navigation bar with the Roost AI logo, a user profile icon, and links for 'RoostGPT', 'Admin', and 'Connectors'. Below the navigation bar, there are tabs for 'Test Suites', 'Analysis', and 'Generations'. The 'Test Suites' tab is active, showing a table of test suites. The table has columns for 'TEST SUITE', 'CREATED BY', 'GEN AI MODEL', 'CATEGORY', 'CREATED ON', 'LAST UPDATED', and 'ACTIONS'. The table lists 10 test suites, including 'ui_gemini_devroost_api_scenario', 'june-functional', 'june-java-unit', 'june-python-adk', 'Apltest001_clone', 'Apltest001', 'june-functional_clone', 'june-ij-test-with-scenario', 'june-ij-test', and 'ui_gemini_unexp_api_test'. Each row includes a 'Show My Test Suites' button and an 'Add Test Suite' button. The bottom of the table shows a pagination bar with 'First', '1', '2', '3', '4', '5', and 'Last'.

Step-by-Step Walkthrough

1. RoostGPT Homepage Loaded

The AI successfully navigates to the RoostGPT shell homepage, displaying the test suites.

<https://dev.roost.ai>

2. Connectors Page Displayed

The AI clicks the 'Connectors' tab, leading to the connectors management page where various connector types are visible.

<https://dev.roost.ai/connectors>

3. Gemini AI Connector Form

The AI opens the 'Add Connector' form and selects 'Gemini AI', displaying the input fields for connector details.

<https://dev.roost.ai/connectors>

4. Connector Name Entered

The AI populates the 'Connector Name' field with "gemini_demo_connector" in the creation form.

<https://dev.roost.ai/connectors>

5. API Key Entered

The AI fills the 'Gemini AI Access Token' field with the provided API key.

<https://dev.roost.ai/connectors>

6. Duplicate Name Error

Upon attempting to save, the system displays an error indicating a connector with the same name already exists.

<https://dev.roost.ai/connectors>

7. Retrying with New Name

The AI attempts to resolve the conflict by updating the connector name to "gemini_demo_connector1".

<https://dev.roost.ai/connectors>

8. Second Name Change Attempt

The AI makes another attempt to create the connector by changing the name to "gemini_demo_connector2".

<https://dev.roost.ai/connectors>

9. Connector Created Successfully

The AI successfully creates the Gemini AI connector, confirmed by a success toast and its appearance in the list.

Discovered Test Scenarios

#	Scenario	Type	Priority
1	Discovered Workflow: Gemini Connector Api Check - Complete User Journey	e2e_business_workflow	high

Discovered Workflow: Gemini Connector Api Check - Complete User Journey

- Verifies the end-to-end process of creating a Gemini AI connector, including navigation, form filling, and submission.
- The user navigates to the Connectors section, initiates the 'Add Connector' process, selects 'Gemini AI', fills in the connector name and API key, and successfully saves the new connector.
- Ensure proper waiting for page navigation after clicking 'Connectors' tab.
 - Verify the success toast message or the presence of the new connector in the list after submission.
